 * rac4444 - Raiyan Chowdhury  
 * Group 100  
 * https://github.com/raiyanac/422c\_p4\_rac4444\_tg22698  
 */
```

Raiyan will be the primary writer of methods in main.java as well as two of the custom critter classes, while Timberlon will complete the algae critter code and two more custom critter codes. This will make it easier to later merge our work due to less of a likelihood of creating merge issues.

Due to the amount of work that needs to be completed in the abstract critter class, both will work on this. Timberlon will work on methods and variables that pertain to the critters as a whole such as the total critter ArrayList, while Raiyan will complete methods that can be universally used by all critters, such as walking and the direction chooser.

Testing will be conducted together in stages. Following each recommended stage implementation (1, 2, and 3) and possibly during each stage at certain points as well, Timberlon and Raiyan will meet and work to extensively debug and test each stage of the code before moving on to the next. On top of this, testing will also be conducted by each member individually prior to each face-to-face meeting simply to ensure that the workload is reduced ahead of time and that trivial issues do not waste time when running extensive tests.

Exception handling will be implemented after testing basic functionality of our code. At this point they will be thoroughly tested with the rest of the code as a whole before submission.
